

Introduction

This document contains essential medical knowledge for testing purposes. It covers common diseases, symptoms, treatments, and medical guidelines. All information is for testing only and should not be used as real medical advice.

Common Symptoms

1. Headache: Pain in the head, causes include stress, dehydration, and infection.
2. Fever: Elevated body temperature, usually due to infection.
3. Cough: Reflex to clear the airways, can be dry or productive.
4. Fatigue: Extreme tiredness, caused by illness, lack of sleep, or chronic conditions.
5. Nausea: Feeling of wanting to vomit, caused by infections, motion sickness, or medications.

Infectious Diseases

Influenza:

Symptoms: Fever, cough, body ache

Treatment: Rest, fluids, antiviral medications

COVID-19:

Symptoms: Fever, dry cough, loss of taste/smell

Treatment: Supportive care, hospitalization for severe cases

Tuberculosis:

Symptoms: Chronic cough, weight loss, night sweats

Treatment: Long-term antibiotics

Chronic Diseases

Diabetes:

Type 1 and Type 2 differences, common medications include insulin and metformin.

Hypertension:

Causes: genetics, lifestyle. Risks: heart attack, stroke. Management: lifestyle, medication.

Asthma:

Symptoms: Wheezing, shortness of breath. Management: Inhalers, avoiding triggers.

Emergency Conditions

Heart Attack:

Symptoms: Chest pain, shortness of breath

Immediate Actions: Call emergency services.

Stroke:

Symptoms: Weakness, speech difficulty

Treatment: Immediate hospital care.

Anaphylaxis:

Symptoms: Swelling, difficulty breathing

Treatment: Epinephrine injection, emergency care.

Pediatric Diseases

Measles: Highly contagious viral infection, symptoms include rash, fever.

Chickenpox: Viral infection causing itchy rash, preventable by vaccination.

Common cold in children: Mild respiratory infection, supportive care.

Vaccination schedules: Ensure children receive all recommended vaccines on time.

Common Medications

Painkillers: Paracetamol, Ibuprofen - for pain and fever.

Antibiotics: Amoxicillin, Azithromycin - treat bacterial infections.

Antihypertensives: Amlodipine, Lisinopril - manage high blood pressure.

Diagnostic Tests

Blood Tests: CBC, Blood Sugar, Lipid Profile - assess overall health.

Imaging: X-ray, MRI, Ultrasound - diagnose structural and internal issues.

COVID-19 PCR test: Detect presence of virus infection.

Lifestyle & Prevention

Diet & Nutrition: Balanced diet with fruits, vegetables, proteins.

Exercise & Physical Activity: Regular exercise to maintain health.

Preventive Check-ups: Regular health screenings for early detection.

Vaccinations: Immunizations prevent many serious diseases.

FAQs

Q: What causes fever?

A: Infection, inflammation, or heat exposure.

Q: How to prevent cold?

A: Hygiene, vaccination, avoid contact with sick people.

Q: When to see a doctor?

A: Persistent symptoms, severe pain, or emergencies.
